

TITLE

Improved Stitchbonded Fabric and Process for Making Same

5

ABSTRACT OF THE DISCLOSURE

An improved stitchbonded fabric has a pattern of stitches formed by a multi-needle stitched set of contractible stitching threads in a planar material that comprises a non-fibrous layer of polymer or metal, such as a metallic foil, a 10 polymeric film, or a leather. Contraction of the stitchbonded fabric provides the fabric with unusual tactile, visual and functional effects.
